Parallel Dipole Line Magnetic Trap for Earthquake & Volcanic Sensing (10 points)

A. BASIC CHARACTERISTICS OF PDL TRAP

1. Determination of the magnet's magnetization (M) (2.5 pt.)

Question	Answer	Marks																																																																																																																																				
<p>A.1 0.1 pt.</p>	<p>Record zero offset (B_0) of the Teslamer without any magnet nearby. Subtract subsequent field measurement with this value.</p> <p>$B_0 =$</p> <div style="text-align: center; opacity: 0.5;"> <p>48TH IPhO 2017 YOGYAKARTA- INDONESIA 16 - 24 JULY 2017</p> </div>																																																																																																																																					
<p>A.2 1.15 pt.</p>	<p>Measure magnetic field B vs. x in the near field region ($7 \leq x \leq 16$ mm) ! <u>Where x is the position measured from the center of the magnet.</u> Record and plot your result on the answer sheet.</p> <table border="1" style="width: 100%; height: 200px; border-collapse: collapse;"> <tr><td style="width: 10%;"></td><td style="width: 10%;"></td><td style="width: 10%;"></td><td style="width: 10%;"></td><td style="width: 10%;"></td><td style="width: 10%;"></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> </table>																																																																																																																																					

A.3 0.75 pt.	Use your experimental data to determine the value of the exponent p . $p =$	
-----------------	--	--

A.4 0.5 pt.	Determine the magnet's magnetization M . $M =$	
----------------	---	--

2. The Magnetic Levitation effect and Magnetic Susceptibility (χ) (1.0 pt.)

Question	Answer	Marks
<p>A.5 0.1 pt.</p>	<p>Place gently a graphite rod HB/0.5 and length = 8 mm in the trap. Measure the levitation height y_0 of the rod (see Fig. 7a)! Hint: Use the insert ruler provided as shown in Fig. 7b. Press the ruler on the magnets to read the position of the graphite rod.</p> <p>$y_0 =$</p>	
<p>A.6 0.8 pt.</p>	<p>Use the result from part A.5 to determine the magnetic susceptibility χ of the graphite rod.</p> <p>$\chi =$</p>	
<p>A.7 0.1 pt.</p>	<p>What kind of magnetic material is graphite? Choose one: (i) Ferromagnetic; (ii) Paramagnetic; or (iii) Diamagnetic?</p>	

3. The camelback potential oscillation and magnetic susceptibility (χ)

Question	Answer	Marks																														
<p>A.8 0.2 pt.</p>	<p>Perform an oscillation for the "HB/0.5" graphite and $l = 8$ mm. Limit to small oscillation amplitude i.e. $A < 4$ mm. Determine the oscillation period. (The oscillation will decay over time due to damping, ignore this damping effect).</p> <table border="1" data-bbox="323 723 1238 925"> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td></tr> </table> 																															
<p>A.9 0.8 pt.</p>	<p>Calculate the magnetic susceptibility (χ) of the graphite using this oscillation.</p> <p>$\chi =$</p>																															

4. Oscillator quality factor (Q) and estimate of air viscosity μ_A (4.0 points)

Question	Answer	Marks																																																																																																																
<p>A.10 0.5 pt.</p>	<p>We need to determine the damping time constant of the oscillation τ. Sketch how you measure τ in <i>a simple way!</i></p>																																																																																																																	
<p>A.11 1.5 pt.</p>	<p>Perform oscillation damping experiments with a group of rods with various diameters and fixed length of 8 mm. Determine the damping time constant τ for each rods</p> <table border="1" data-bbox="304 1198 1224 1753"> <tbody> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> </tbody> </table>																																																																																																																	

A.12 1.0 pt.	Determine the air viscosity μ_A .	
	$\mu_A =$	

B. SENSOR APPLICATION OF THE PDL TRAP

5. PDL Trap Seismometer (0.5 pt.)

Question	Answer	Marks
B.1 0.2 pt.	Which diameter of rod do you choose?	
B.2 0.3 pt.	Calculate the seismometer acceleration noise floor (a_n) for the rod of your choice.	

6. PDL Trap Tiltmeter (2 pt.)

Question	Answer	Marks
B.3 0.5 pt.	Derive the relation theoretically between displacement Δz with the screw thread size S and the number of turns (N).	

Experiment

English (Official)

AE2

<p>B.4 1.25 pt.</p>	<p>By turning the screw slowly, determine the rod displacement Δz vs. the number of screw turns (N). Determine the thread size S.</p> <table border="1" data-bbox="304 506 1235 943"><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr></table> <p>$S =$</p>																																																																															
<p>B.5 0.25 pt.</p>	<p>When the ground tilt changes we want the graphite rod to go to equilibrium as fast as possible (instead of sustaining very long oscillation) to allow easy reading. What is the ideal Q factor for a tiltmeter?</p> <p>$Q =$</p>
